All,

Thank you for your contribution to the PowerPoint Presentation I'll be making at:

Highly Fluorinated Compounds  
Social and Scientific Discovery  
Northeastern University Social Science Environmental Health Research Institute  
June 14 – 15, 2017

<https://pfasproject.com/2017/01/05/pfas-conference/>

The conference agenda is here:

<https://pfasproject.com/tentative-conference-schedule/>

While it has already been formally cleared by EPA, I'm hoping you will have time to provide comments for any changes that you would like to include.

My intention for this presentation is to highlight the fact that there are many new PFAS being released and that we don't really know what they are despite the fact that people are being exposed.

I wanted to combine the work we have done on the Cape Fear River with the more recent work in the Ohio River Valley in the Parkersburg, WV so I'm stressing the occurrence of GenX in both places.

If you have any comments or suggestions, please let me know.

Thank you very much,

Andy
